Building Chaplain Stress Resilience
John Powers, LICSW, BCETS - There’s more to stress resiliency than just ‘bouncing back well’.
Chaplains, like all Emergency Services personnel, must sort through the many definitions, models
(and good research) to find the components to not only keep their own “ship afloat” but also to
help their departments find their own practices of fitness.

1030-1130  Break-Out Sessions #1 - Choose ONE  Madison Ballroom
A- Excited Delirium  Salon B
Excited delirium (EXD), first described in the mid 1800’s, has been referred to by many other
names - Bell’s mania, lethal catatonia, acute exhaustive mania and agitated delirium. Regardless
of the label used, all accounts describe almost the exact same sequence of events: delirium with
agitation (fear, panic, shouting, violence and hyperactivity), sudden cessation of struggle,
respiratory arrest and death.
